

**The Effect of the Check List Developed for Drug Administration From Enteral Nutrition Tube on
Administration Errors**

01.10.2022

The study was carried out on 69 subjects. The data was completed by transferring to IBM SPSS Statistics 23 program. While evaluating the study data, firstly the Kolmogorow-Smirnov test was applied for the normal distribution and it was decided to apply parametric tests. Descriptive statistics (mean, standard deviation) are given for numerical variables. Independent sample t-test and chi-square test were used for the difference between the two groups, and the dependent sample t-test was used to examine the differences between the times. $P < 0.05$ was accepted for significance.
