Informed Consent Forms

CONSENT TO PARTICIPATE IN A RESEARCH STUDY Caregiver Version

Short Title: Recasting and Reading Study – PILOT VERSION

Full Title: Recasting and book reading under ideal (dose-controlled) and typical (dose-variable) conditions: The role of fidelity and adherence in production and comprehension outcomes for children with DLD – PILOT VERSION

Principal Investigators: Amanda Owen Van Horne, PhD CCC-SLP, Helen Mach, PhD CCC-SLP, Giovanna Morini, PhD Yi Ting Huang, PhD

KEY INFORMATION

Important aspects of the study you should know about first:

- **Purpose:** The purpose of the pilot study is to develop materials for the full version of the study. The purpose of the full study is to compare different treatments (recasting/book reading) and providers (parent/lab staff) for Developmental Language Disorder (child language impairment).
- **Procedures:** If you choose to participate, we will ask you to complete questionnaires about you and the child you care for. We will test the child’s hearing, pattern-matching, and a variety of language skills. If the child qualifies to continue, we will assign the child to one of two possible language treatments, delivered by you or by our staff. During treatment, we will ask you to have the child wear an audio-recorder 2 days/week. After 4 weeks, we will test the child’s progress and interview you.
- **Duration:** First, we will meet for 2-5 testing visits (60-90 minutes each time) to assess the child’s language skills. Then there will be 4 weeks of treatment (2 hours per week). Then we will test the child you care for and interview you (2 visits of 60-90 minutes each). We will do our best to accommodate your scheduling needs.
- **Risks:** The main risk is getting bored or tired. You may also experience some anxiety about you or the child’s performance or worry about your ability to provide treatment. We will try to explain everything clearly and make sure you are comfortable with each task.
- **Benefits:** The treatments being used have shown benefits for other children like the child you care for. The child’s language skills may improve after treatment, but we cannot guarantee it. This research may also help us develop treatments to help other children in the future.
- **Alternatives:** The alternative to this study is traditional speech-language therapy in a clinical or school setting. You may participate in the study even if the child you care for receives therapy elsewhere.
- **Costs and Compensation:** There is no cost to participate in this study. You will not be compensated for your participation. The child you care for will receive \$20.
- **Participation:** Taking part in this research study is your decision. You can decide to participate and then change your mind at any point.

Please carefully read the entire document. You can ask any questions you may have before deciding if you want to participate.

You are being invited to participate in a research study. This consent form tells you about the study including its purpose, what you will be asked to do if you decide to take part, and the risks and benefits of being in the study.

Please read the information below and ask us any questions you may have before you decide whether or not you want to participate.

Any regular adult caregiver of the child (grandparent, aunt, etc.) may participate in the delivery of therapy and the interviews, provided that the parent/guardian is agreeable and has given permission. You are signing this form because you are NOT the child's parent or legal guardian. The term "the child" refers to the child who is participating in the study.

PURPOSE OF THE STUDY

The purpose of this pilot is to develop materials for a large-scale treatment study. The purpose of the treatment study is to compare different treatment strategies for Developmental Language Disorder (child language impairment). In particular, we want to know more about how to teach children new types of sentences. This study will help us learn which treatment methods are most effective when delivered either in the lab or at home by you or another caregiver.

WHO IS BEING ASKED TO PARTICIPATE?

There will be approximately 30 children and up to 60 caregivers in this pilot study. You are being asked to participate because the child you care for is 4-7 years old and has difficulty learning and using language.

PROCEDURES: WHAT WILL YOU BE ASKED TO DO?

Overview

First, the child's parent or legal guardian must complete consent documentation (on paper or online) for the child to participate in the study. Then we will ask you to bring the child to 2-5 screening and pre-test visits (60-90 minutes each). If the child qualifies to continue, you and the child will then participate in 4 weeks of language therapy (8 hours total). During this time, we will ask you to take audio recordings at home every week (8 recordings total). After treatment, we will meet for 2 post-testing visits (60-90 minutes each) to measure the child's progress. We will also interview you about your experience at this time. We may recontact you up to 8 weeks later to confirm that we understood your interview responses correctly.

Most people will complete the study in 8-10 weeks. We will work at the child's pace to get the most accurate measure of their skills. We will take breaks or schedule follow-up appointments as needed to ensure the child is comfortable and engaged. Throughout the study, we will ask you to complete surveys online or in person. If desired, we can administer tests to the child while you complete these surveys in order to minimize the total number of visits needed.

Study visits may take place at the lab or another mutually agreeable location, such as a local library. Alternatively, "visits" may take place via telehealth (meeting virtually using a secure video calling service). If we meet with you virtually, we will conduct a "tech check" meeting prior to the first assessment of the child to ensure that everything goes smoothly.

We will record audio and/or video at all visits.

Screening (1-3 visits of 60-90 minutes each)

At your first visit, we will explain the study procedures to you and answer any questions you have. After you consent to participate in the study, we will ask you to fill out some surveys about you and the child. Consent forms and surveys may be completed either on paper or online.

We will test the child's hearing, pattern-matching, and a variety of language skills. Most of our tasks involve showing the child pictures in a book or on a computer screen and asking questions about them. Screening will determine if the child meets the research definition of Developmental Language Disorder (DLD).

Pre-testing (1-2 visits of 60-90 minutes each)

We will complete further testing to determine whether the child can benefit from our treatments. We will test the child's ability to use and understand two sentence structures (*passives* and *relative clauses*). If the child already knows these structures, they will not qualify for the study.

In one task, we will ask the child to sit in front of a computer screen and look at pictures while listening to audio recordings. An eye tracker (a small machine that records the child's eye movements) will be located near the screen. The eye tracker is completely harmless and will not touch the child.

Training and Treatment (4 weeks)

If the child qualifies to continue, the child will complete 4 weeks (8 hours) of treatment.

We will randomly assign (like rolling dice or flipping a coin) the child to one of 4 possible treatment + provider combinations: book reading at home, recasting at home, book reading in the lab, or recasting in the lab. Recasting is like rephrasing what the child has just said using a specific sentence structure.

- Book Reading at Home: 3 training visits (in-person or via telehealth) + You will read books to the child at least 4 times a week (16 readings total).
- Recasting at Home: 3 training visits (in-person or via telehealth) + You will play and recast with the child for 30 min. 4x/week or 60 min. 2x/week (8 hours total).
- Book Reading by the Lab: 1 training visit + 2 visits/week where lab staff will read 2 books to them (16 readings total). Visits may be at the lab, another agreeable location, or via telehealth.
- Recasting by the Lab: 1 training visit + 2 visits/week where lab staff will play and recast with them (8 hours total). Visits may be at the lab, another agreeable location, or via telehealth.

At the training visit(s), we will give you a special audio recorder (LENA) that is made for children and teach you how to use it. If the child is assigned to receive therapy at home, we will also teach you the proper treatment techniques. We will then ask you to demonstrate what you have learned for us.

We will arrange with you how to exchange the LENA recorder for a new one every 2 weeks. We will ask you to plan LENA recordings ahead of time so we can send text message reminders. If the child is assigned to receive therapy at home, we will also ask you to let us know when you provide treatment and how easy it is.

Throughout this time, we will ask you to complete regular surveys to keep track of how the treatment is going.

Post-testing and Caregiver Interview (1-2 visits of 60-90 minutes each)

After treatment, we will test the child on the 2 sentence structures again to measure their progress. We will ask you to complete another survey and we will interview you to ask about your experiences participating in the study. We may contact you again up to 8 weeks after this interview to ensure that we understood your responses correctly.

WHAT ARE POSSIBLE RISKS AND DISCOMFORTS?

The main risk is that the child may get bored or tired. We will take breaks and use child-friendly activities (like board games and stickers) to reduce boredom and fatigue.

There is a risk that you may feel anxiety about your own or the child’s performance on our tasks. We will try to explain everything clearly and make sure you are comfortable with each task. Please ask us any questions you have, and we will be sure to address them.

WHAT ARE POTENTIAL BENEFITS FROM THE STUDY?

Through participating in this study, the child will hear repeated examples of complex sentences. This may improve the child’s ability to understand and use these types of sentences, but we cannot guarantee it. All of the treatment methods used in this study are evidence-based, meaning that past research suggests the treatment will work. The purpose of this study is to find out if these treatment methods really do work and if some are better than others. We also want to know if a treatment is better when delivered at home or in the lab and if caregivers prefer one approach to treatment over another.

The information we learn from this study could also help us design new speech/language treatments in the future. This could help us develop better treatments to promote language learning in children with DLD.

NEW FINDINGS THAT COULD AFFECT YOUR PARTICIPATION

During the course of this study, we may learn new important information. This may include information that could cause you to change your mind about participating in the study. If any new important information becomes available while you are a participant, we will let you know.

CONFIDENTIALITY: WHO MAY KNOW THAT YOU PARTICIPATED IN THIS RESEARCH?

We will handle your data as confidentially as possible. If results of this study are published or presented, individual names and other personally identifiable information will not be used.

To help protect you and the child’s confidentiality, we will use an alphanumeric code to track you and the child’s participation instead of using your real names. Paper records will be stored in a locked filing cabinet at the University of Delaware (UD). Electronic records (including audio/video recordings) will be stored on password-protected servers and online databases hosted by UD.

We will share audio data with third parties for processing and analysis. LENA recordings will be processed by LENA Online. We will not give LENA Online any information about you or the child besides the child’s birthdate. LENA Online does not store audio files after processing. They return reports to us about the amount and type of talk in the home. Caregiver interviews will be transcribed by Otter.ai, an automated processing program. We will not give Otter.ai any information about you or the child. Otter.ai does not store audio files after processing.

We will store post-processed audio files on university servers for later analysis. We plan to transcribe the LENA recording audio from the time of day when you report providing treatment (for home treatment conditions) and other comparison times (for all conditions). We will also transcribe the language samples taken at pre- and post-test.

Records relating to this study will be kept for at least three years after the grant funding the study ends. These records may be viewed by the Institutional Review Boards at UD. An Institutional Review Board is a committee formally designated to approve, monitor, and review biomedical and behavioral research involving human subjects.

We must also let you know that if during your participation in this study our research team was to observe or suspect, in good faith, child abuse or neglect, we are required by state law to file a report with the appropriate officials.

USE OF DATA COLLECTED FROM YOU IN FUTURE RESEARCH:

After your personally identifiable information is removed, the data collected in this study may be used for future research without additional informed consent from you or your legally authorized representative. For instance, we may share the pattern of test results obtained (after removing the child's name and birthdate), to help us better understand which tests tend to show similar scores.

We may distribute de-identified data from this study to other researchers for future research studies, so long as the studies are approved by the review board at the researcher's institution.

COSTS AND COMPENSATION

There is no cost to participating in this study. The child will receive \$20 for their participation. You may choose to receive compensation in the form of a check or gift card.

DO YOU HAVE TO TAKE PART IN THIS STUDY?

You do not have to participate in this study. It is your decision. If you choose to participate, you have the right to stop at any time. If you decide to stop taking part in the study, there will be no penalty or loss of benefits to which you are otherwise entitled. Your decision to stop participation, or not to participate, will not influence current or future relationships with UD and UMD.

INSTITUTIONAL REVIEW BOARD

This research study has been reviewed and approved by the University of Delaware Institutional Review Board (UD IRB), which is a committee formally designated to approve, monitor, and review biomedical and behavioral research involving humans. If you have any questions or concerns about your rights as a research participant, you may contact the UD IRB at hsrb-research@udel.edu or (302) 831-2137.

CONTACT INFORMATION

If you have any questions about the purpose, procedures, or any other issues related to this research study you may contact the Principal Investigator, Dr. Amanda Owen Van Horne at (302) 831-3982 or ajovh@udel.edu.

CONSENT TO PARTICIPATE IN THE RESEARCH STUDY

I have read and understood the information in this form and I agree to participate in the study with the child I care for. I am 18 years of age or older and I am one of the primary caregivers for the child named below. I have been given the opportunity to ask any questions and my questions have been answered to my satisfaction. I understand that I will be given a copy of this form for my records.

Child (Printed Name)

Caregiver
(Printed Name)

Caregiver

OPTIONAL CONSENT TO BE CONTACTED FOR FUTURE STUDIES

Do we have your permission to contact you regarding participation in future studies? If you agree to being contacted in the future, we will keep your contact information.

Your choice about being contacted for future studies will have no impact on your participation in this study.

Please write your initials next to your preferred choice.

_____ YES, you may contact me about future studies

_____ NO, you may not contact me about future studies

OPTIONAL CONSENT FOR USE OF DATA TO TRAIN PRE-SERVICE STUDENTS & OTHER PROFESSIONALS

Do we have your permission to use audio and/or video data collected from the child for training purposes? For example, we may share recordings of the child to teach students, educators, speech language pathologists, and other researchers how to follow testing procedures.

Your choice about future use of your data to train others will have no impact on your participation in this study.

Please write your initials next to your preferred choice.

_____ YES, I will allow the use of audio and video data collected from me and the child for training purposes.

_____ NO, I will not allow the use of audio and video data collected from me and the child for training purposes.

OPTIONAL CONSENT FOR ADDITIONAL USES OF IDENTIFIABLE VIDEO RECORDINGS/PHOTOGRAPHS

I voluntarily give my permission to the researchers in this study to use videos and photographs of me and/or the child collected as part of this research study for publications, presentations, and/or educational purposes. I understand that no identifying information beyond that contained in the video/photographs will be provided to educational/scientific audiences; however, my facial features and/or those of the child may be seen.

Your choice about future use of video/photographs will have no impact on your participation in this study.

Please write your initials next to your preferred choice.

_____ YES, I will allow the use of video/photographs of me and/or the child for all purposes.

_____ ASK ME FIRST. I might allow the use of video/photographs of me and/or the child for certain purposes if the research team contacts me for written permission each time.

_____ NO, I will not allow the use of video/photographs of me or the child for any purpose.

You are being invited to participate in a research study. This consent form tells you about the study including its purpose, what you will be asked to do if you decide to take part, and the risks and benefits of being in the study. Please read the information below and ask us any questions you may have before you decide whether or not you want to participate.

PURPOSE OF THE STUDY

The purpose of this pilot is to develop materials for a large-scale treatment study. The purpose of the treatment study is to compare different treatment strategies for Developmental Language Disorder (child language impairment). In particular, we want to know more about how to teach children new types of sentences. This study will help us learn which treatment methods are most effective when delivered either in the lab or at home by you or another caregiver.

WHO IS BEING ASKED TO PARTICIPATE?

There will be approximately 30 children and up to 60 caregivers in this pilot study. You are being asked to participate because your child is 4-7 years old and has difficulty learning and using language.

PROCEDURES: WHAT WILL YOU BE ASKED TO DO?

Overview

First, we will ask you to bring your child to 2-5 screening and pre-test visits (60-90 minutes each). If your child qualifies to continue, you (or another designated caregiver) and your child will then participate in 4 weeks of language therapy (8 hours total). During this time, we will ask the participating caregiver to take audio recordings at home every week (8 recordings total). After treatment, we will meet for 2 post-testing visits (60-90 minutes each) to measure your child's progress. We will also interview the participating caregiver about their experience at this time. We may recontact the participating caregiver up to 8 weeks later to confirm that we understood their interview responses correctly.

Most people will complete the study in 8-10 weeks. We will work at your child's pace to get the most accurate measure of their skills. We will take breaks or schedule follow-up appointments as needed to ensure your child is comfortable and engaged. Throughout the study, we will ask the participating caregiver to complete surveys online or in person. If desired, we can administer tests to your child while the participating caregiver completes these surveys in order to minimize the total number of visits needed.

Study visits may take place at the lab or another mutually agreeable location, such as a local library. Alternatively, "visits" may take place via telehealth (meeting virtually using a secure video calling service). If we meet with you virtually, we will conduct a "tech check" meeting prior to the first assessment of your child to ensure that everything goes smoothly.

We will record audio and/or video at all visits.

Screening (1-3 visits of 60-90 minutes each)

At your first visit, we will explain the study procedures to you and answer any questions you have. After you consent to participate in the study, we will ask you to fill out some surveys about your child. Consent forms and surveys may be completed either on paper or online. The participating caregiver will also fill out surveys about themselves.

We will test your child's hearing, pattern-matching, and a variety of language skills. Most of our tasks involve showing your child pictures in a book or on a computer screen and asking questions about them. Screening will determine if your child meets the research definition of Developmental Language Disorder (DLD).

Pre-testing (1-2 visits of 60-90 minutes each)

We will complete further testing to determine whether your child can benefit from our treatments. We will test your child's ability to use and understand two sentence structures (*passives* and *relative clauses*). If your child already knows these structures, they will not qualify for the study.

In one task, we will ask your child to sit in front of a computer screen and look at pictures while listening to audio recordings. An eye tracker (a small machine that records your child's eye movements) will be located near the screen. The eye tracker is completely harmless and will not touch your child.

Training and Treatment (4 weeks)

If your child qualifies to continue, your child will complete 4 weeks (8 hours) of treatment.

We will randomly assign (like rolling dice or flipping a coin) your child to one of 4 possible treatment + provider combinations: book reading at home, recasting at home, book reading in the lab, or recasting in the lab. Recasting is like rephrasing what the child has just said using a specific sentence structure.

- Book Reading at Home: 3 training visits (in-person or via telehealth) + Caregiver will read books to your child at least 4 times a week (16 readings total).
- Recasting at Home: 3 training visits (in-person or via telehealth) + Caregiver will play and recast with your child for 30 min. 4x/week or 60 min. 2x/week (8 hours total).
- Book Reading by the Lab: 1 training visit + 2 visits/week where lab staff will read 2 books to them (16 readings total). Visits may be at the lab, another agreeable location, or via telehealth.
- Recasting by the Lab: 1 training visit + 2 visits/week where lab staff will play and recast with them (8 hours total). Visits may be at the lab, another agreeable location, or via telehealth.

At the training visit(s), we will give the participating caregiver a special audio recorder (LENA) that is made for children and teach them how to use it. If your child is assigned to receive therapy at home, we will also teach the participating caregiver the proper treatment techniques. We will then ask them to demonstrate what they have learned for us.

We will arrange with the participating caregiver how to exchange the LENA recorder for a new one every 2 weeks. We will ask the participating caregiver to plan LENA recordings ahead of time so we can send text message reminders. If your child is assigned to receive therapy at home, we will also ask the participating caregiver to let us know when they provide treatment and how easy it is.

Throughout this time, we will ask the participating caregiver to complete regular surveys to keep track of how the treatment is going.

Post-testing and Caregiver Interview (1-2 visits of 60-90 minutes each)

After treatment, we will test your child on the 2 sentence structures again to measure their progress. We will ask the participating caregiver to complete another survey and we will interview them to ask about their experiences participating in the study. We may contact the participating caregiver again up to 8 weeks after this interview to ensure that we understood their responses correctly.

WHAT ARE POSSIBLE RISKS AND DISCOMFORTS?

The main risk is that your child may get bored or tired. We will take breaks and use child-friendly activities (like board games and stickers) to reduce boredom and fatigue.

There is a risk that you may feel anxiety about your own or your child’s performance on our tasks. We will try to explain everything clearly and make sure you are comfortable with each task. Please ask us any questions you have, and we will be sure to address them.

WHAT ARE POTENTIAL BENEFITS FROM THE STUDY?

Through participating in this study, your child will hear repeated examples of complex sentences. This may improve your child’s ability to understand and use these types of sentences, but we cannot guarantee it. All of the treatment methods used in this study are evidence-based, meaning that past research suggests the treatment will work. The purpose of this study is to find out if these treatment methods really do work and if some are better than others. We also want to know if a treatment is better when delivered at home or in the lab and if caregivers prefer one approach to treatment over another.

The information we learn from this study could also help us design new speech/language treatments in the future. This could help us develop better treatments to promote language learning in children with DLD.

NEW FINDINGS THAT COULD AFFECT YOUR PARTICIPATION

During the course of this study, we may learn new important information. This may include information that could cause you to change your mind about participating in the study. If any new important information becomes available while you are a participant, we will let you know.

CONFIDENTIALITY: WHO MAY KNOW THAT YOU PARTICIPATED IN THIS RESEARCH?

We will handle your data as confidentially as possible. If results of this study are published or presented, individual names and other personally identifiable information will not be used.

To help protect you and your child’s confidentiality, we will use an alphanumeric code to track you and your child’s participation instead of using your real names. Paper records will be stored in a locked filing cabinet at the University of Delaware (UD). Electronic records (including audio/video recordings) will be stored on password-protected servers and online databases hosted by UD.

We will share audio data with third parties for processing and analysis. LENA recordings will be processed by LENA Online. We will not give LENA Online any information about you or your child besides your child’s birthdate. LENA Online does not store audio files after processing. They return reports to us about the amount and type of talk in the home. Caregiver interviews will be transcribed by Otter.ai, an automated processing program. We will not give Otter.ai any information about you or your child. Otter.ai does not store audio files after processing.

We will store post-processed audio files on university servers for later analysis. We plan to transcribe the LENA recording audio from the time of day when you report providing treatment (for home treatment conditions) and other comparison times (for all conditions). We will also transcribe the language samples taken at pre- and post-test.

Records relating to this study will be kept for at least three years after the grant funding the study ends. These records may be viewed by the Institutional Review Boards at UD. _____ YES, I will allow the use of video/photographs of me and/or my child for all purposes.

_____ ASK ME FIRST. I might allow the use of video/photographs of me and/or my child for certain purposes if the research team contacts me for written permission each time.

_____ NO, I will not allow the use of video/photographs of me or my child for any purpose.

OPTIONAL LANGUAGE RESEARCH REGISTRY CONSENT

The Language Research Registry (LRR) stores participants’ contact information (participant/child’s name/parents’ names, address, email, phone) and some demographic information (e.g., birth date, gender, race, self/parent-reported disability, participant/parent education level, language exposure, studies you have participated in) and standardized test score data collected as a part of this study in a secure, password-protected database.

Researchers in labs affiliated with the Language Research Registry may use this information to contact you about participating in future studies and to conduct approved retrospective studies. Storing your data does not commit you to future participation and we will only add the data you allow us to add. If you wish to remove your or your child’s contact information or other data, you may do so at any time by contacting the Language Research Registry at language-registry@udel.edu.

Your selection will not affect your participation in this study in any way.

Please write your initials next to your preferred choices:

- _____ My/my child’s contact information may be updated in the LRR
- _____ My/my child’s demographic information may be updated in the LRR
- _____ My/my child’s standardized test score information may be updated/added to the LRR
- _____ Do not include/update any of my/my child’s information from this study in the LRR
- _____ Please remove the following pre-existing information from the LRR completely
